

QualiWare Product Structure

QualiWare enables positive change by providing tools, methods and services that ensure coherence, consensus and consistency (the 3 C's)

The QualiWare product structure reflects this by clearly dividing the products and services according to their contribution to the 3 C's.

Consistency is ensured via the **QualiWare Integration Server** and the **Governance Workflow Engine**, which are the underlying components of the QualiWare Product suite and help you ensure the consistency throughout all your enterprise activities.

Coherency is structured around the main QualiWare products: **QualiWare EA** and **QualiWare EM** (QEA and QEM respectively), which serve as the modeling and management platforms.

Lastly yet importantly **consensus** is enabled by an array of offerings focusing on involving the whole enterprise, from the leadership to domain area experts. The consensus product suite offers capabilities such as **collaboration**: online publishing-, editing- and modeling- of content; usage statistics; various methods for communication; mobile app; as well as tools and methods for enabling and ensuring enterprise-wide compliance, audits, and improvements.

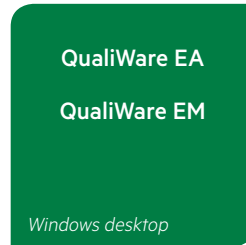

With the new QualiWare product structure it is now easier than ever to implement coherence, consensus and consistency, while enabling collaboration throughout the whole enterprise.
